ABSTRACTED-PUB-NO: JP 62207375A

BASIC-ABSTRACT:

The compsn. comprises dispersion phase of very fine liq. particles of the soln. of oil-solubl dyestuff dissolved in organic solvent, dispersed in water as principal component of dispersio medium. The solubility of the organic solvent in water at ordinary temp. is under 1 wt.%. Specific gravity of the solvent before its dissolution of the oil-soluble dye is 0.9-1.1 at ordinary temp..

USE/ADVANTAGE - The ink compsn. is emulsified disperse system with water as the disperse medi and the organic solvent that dissolves oil-soluble dye as the disperse phase. When the printi on the ink-jet recording paper is performed by the use of this ink compsn., water as disperse medium permeates the recording paper inside quickly, oil-soluble dye selectively remains on t paper surface and so dark coloured images without bleeding can be obt'd. on the paper. Water does not cause bleeding of images or redn. of colour deepness. The compsn. has excellent stability and does not give rise to clogging of jet-nozzle in the ink jet recorder for a long period.
